

“Pachpan lakh square kilometer par phaila hua dharti ka yeh hissa, jise zameen ke phapray (Lungs of the Earth) kaha jata hai... Ji haan, main baat kar raha hoon Amazon Forest ki. Yeh jungle itna **vadda** hai ke iske darakhton ki wajah se hamari Earth ki total oxygen ka lagbhag 20 feesad hissa paida hota hai. Is baat ko aasani se yun samjho, agar zameen se Amazon jungle khatam kar diya jaye to dharti par se 20 percent oxygen kam ho jayegi. Is ke nateeje mein insaan aur janwar saans nahi le **paayenge**. Oxygen ki kami ki wajah se dimagh aur dil ka function kharaab ho jayega, aur kuch hi minuteon mein zyada tar insaan aur janwar mar **jaayenge**.” Agar Amazon Forest ke area ki baat ki jaye to yeh jungle South American states se hokar Colombia, Venezuela, Ecuador, Peru, Bolivia, Guyana aur Suriname se hota hua aakhir mein Brazil par ja kar khatam hota hai. Matlab, ye jangal taqriban 9 mulkon mein phaila hua hai. Aaj ki video mein hum jaanenge isi jungle ke baare mein kuch aisi information jo aaj se pehle aapne kisi se nahi suni hogi. Lekin us se pehle, hit the subscribe button and keep watching this video. Nazireen, **chaalees** hazaar karor darakhton ka yeh jungle jisko darakhton ne poori tarah se apne neeche chhupaya hua hai. Hairat ki baat to yeh hai ke yeh darakht itne zyada hain ke Amazon Forest ki dharti par kabhi dhoop nahi padti. Sooraj ki kiranen iski zameen par nahi padti aur Amazon Forest ko Amazon Rain Forest bhi kaha jata hai. Iski wajah yeh hai ke yahan koi hafta aisa nahi aata jisme barish na ho aur aap yahan ke darakhton ka andaza aise laga sakte hain ke jab kabhi Amazon Rain Forest mein barish hoti hai to barish ka pani darakhton par padne ke baad zameen par girne mein taqreeban das minute lagte hain, kyun ke yeh darakht itne ghane hain ke upar se pani neeche aane mein bhi kaafi waqt lag jata hai. Yahan ke isi behtareen maholiyati nizaam aur barish ki wajah se hi is jungle mein aise ajeeb o gareeb janwar, plants aur parindon ki qismen pai gayi hain jo duniya mein Amazon Forest ke ilawa kahin nahi pai jati. Abhi tak ki research ke mutabiq yahan par 1300 mukhtalif parindon ki qismen, 2200 machhliyon ki qismen, 400 mammals, 380 ajeeb o ghareeb reengne wale janwar aur 40 hazaar se zyada plants ki qismen pai ja chuki hain. Baat ki jaaye agar janwaron ki to Amazon Forest mein aise janwar bhi maujood hain jo ek hi lamhe mein tiger ko bhi nigal sakte hain. Yeh dekhiye Green Anaconda jo 30 foot lamba aur 250 kg wazan ki Anaconda hai. Yeh saanp duniya ka sabse bada saanp hai jo ek hi jhatke mein tiger aur hiran jaise janwar ko nigalne ki taqat rakhta hai.
